SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 21/10/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 15/10/2024, issued 15/10/2024), allergen declaration and IFRA 51st Amendment certificate (15/10/2024). The manufacturer declares component concentrations as ranges; the classification was calculated using the upper limit of each range, which reproduces the manufacturer's classification of the pure fragrance (H315, H317, H319, H411) and of its 5%, 10% and 25% dilutions (H317; H317, H412; H317, H412). The allergen declaration and the IFRA certificate give total cinnamal (6.925%) and coumarin (3.126%), which include the natural content of the cassia oil; because cassia oil is assessed as a constituent in its own right, the SDS values were used for the free substances. Cinnamal is a Skin Sens. 1A sensitiser (limit 0.1%), so even the 5% preparation is classified H317. Because the IFRA Category 10A limit is 7.07%, the diffuser preparation was calculated at 7% in Augeo Clean Multi instead of 25%.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern.
