SECTION 16: Other information

Revision	Version 1.1 — Eco Candle Project edition, 04/11/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 23/07/2026, issued 23/07/2026), IFRA 51st Amendment certificate (23/07/2026). The manufacturer declares component concentrations as ranges. Exact values from the manufacturer's IFRA certificate were used where available (tetramethyl acetyloctahydronaphthalenes, eugenol, d-limonene, coumarin, cinnamal, benzaldehyde) and the upper limit of the range otherwise (conservative); with these values the calculation reproduces the manufacturer's classification of the pure fragrance (H317, H411). For cinnamal the specific concentration limit stated by the manufacturer (Skin Sens. 1, C ≥ 0.01%) was applied. The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5%, 10% and 25% preparations were calculated by Eco Candle Project with the CLP calculation method. Changes from version 1.0 (20/10/2026): the generic cut-off values of Regulation (EC) No 1272/2008, Annex I, Table 1.1 are now applied in the summation method for aquatic hazards (ingredients below 1 % — or 0.1 % ÷ M for Aquatic Acute 1 / Chronic 1 — are not taken into account). 10% preparation: H317, H412 → H317. Composition, other hazard classes and IFRA limits unchanged.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; OTNE = tetramethyl acetyloctahydronaphthalenes; HHCB = hexamethylindanopyran; SVHC = Substance of Very High Concern.
