SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 28/10/2026. Based on the manufacturer's SDS for the pure fragrance (revision of 28/02/2024, issued 28/02/2024), allergen declaration and IFRA 51st Amendment certificate (27/03/2024). The manufacturer declares component concentrations as ranges; the classification was calculated with the upper limit of each range, which coincides with the exact concentrations stated in the manufacturer's IFRA certificate (e.g. benzyl alcohol 2.18%, benzyl benzoate 1.12%, cinnamal 0.73%), and reproduces the manufacturer's classification of the pure fragrance (H317, H411) and of the 25% preparation (H317, H412). The manufacturer's SDSs for the 5% and 10% preparations (2021) predate the current version of the formula and contain no composition data: they show the 5% preparation as not classified (no labelling) and the 10% preparation as not classified (EUH208). Applying the CLP calculation method to the current composition, the 5% preparation carries EUH208 (cinnamal, a Category 1A sensitiser, is above 1/10 of its 0.1% limit) and the 10% preparation is classified Aquatic Chronic 3 — H412 (100 × Chronic 1 + 10 × Chronic 2 ≥ 25%). Eco Candle Project applies the calculated, more protective classification.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern.
