SECTION 16: Other information

Revision	Version 1.1 — Eco Candle Project edition, 04/11/2026. Based on the manufacturer's SDS for the pure fragrance (version 6 of 12/09/2023, issued 12/09/2023), IFRA 50th Amendment certificate (25/01/2023). The manufacturer declares component concentrations as ranges; the classification was calculated conservatively using the upper limit of each range. The manufacturer classifies the pure fragrance as Skin Sens. 1 — H317 and Aquatic Chronic 3 — H412. With the upper limits the calculation reproduces Skin Sens. 1 — H317 but gives Aquatic Chronic 2 — H411 instead of H412 (2-tert-butylcyclohexyl acetate up to 24.99% together with OTNE and delta-damascone); Eco Candle Project keeps the more protective result, including the transport classification as an environmentally hazardous substance. Some classification lines of the manufacturer's current SDS (version 6) are truncated and were completed from the manufacturer's previous SDS (version 3) for the same substances. The manufacturer has not issued SDSs for diluted preparations — the 5%, 10% and 25% classifications were calculated by Eco Candle Project with the CLP calculation method. Changes from version 1.0 (23/10/2026): the generic cut-off values of Regulation (EC) No 1272/2008, Annex I, Table 1.1 are now applied in the summation method for aquatic hazards (ingredients below 1 % — or 0.1 % ÷ M for Aquatic Acute 1 / Chronic 1 — are not taken into account). 5% preparation: H317, H412 → H317. Composition, other hazard classes and IFRA limits unchanged.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; OTNE = tetramethyl acetyloctahydronaphthalenes; SVHC = Substance of Very High Concern.
