SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Acute toxicity (oral)	Acute Tox. 4 — H302
Eye irritation	Eye Irrit. 2 — H319
Skin sensitisation	Skin Sens. 1 — H317
Aquatic hazard, acute	Aquatic Acute 1 — H400
Aquatic hazard, chronic	Aquatic Chronic 2 — H411

Classification calculated by Eco Candle Project with the CLP calculation method (Regulation (EC) No 1272/2008), using the upper limit of each concentration range declared by the manufacturer, which coincides with the exact values of the manufacturer's allergen declaration and IFRA certificate (benzyl benzoate 76.2%, cinnamal 7.5%, coumarin 0.7%). In addition to the manufacturer's classification (H302, H317, H319, H411), Aquatic Acute 1 — H400 is applied because benzyl benzoate (Aquatic Acute 1) is present above 25%. The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5% and 10% preparations were calculated by Eco Candle Project. IFRA limits this fragrance to 2.49% in reed diffusers (Category 10A): it is not suitable for diffusers, so no diffuser SDS is issued.
